

Open a Windows computer, Right click and click Manage

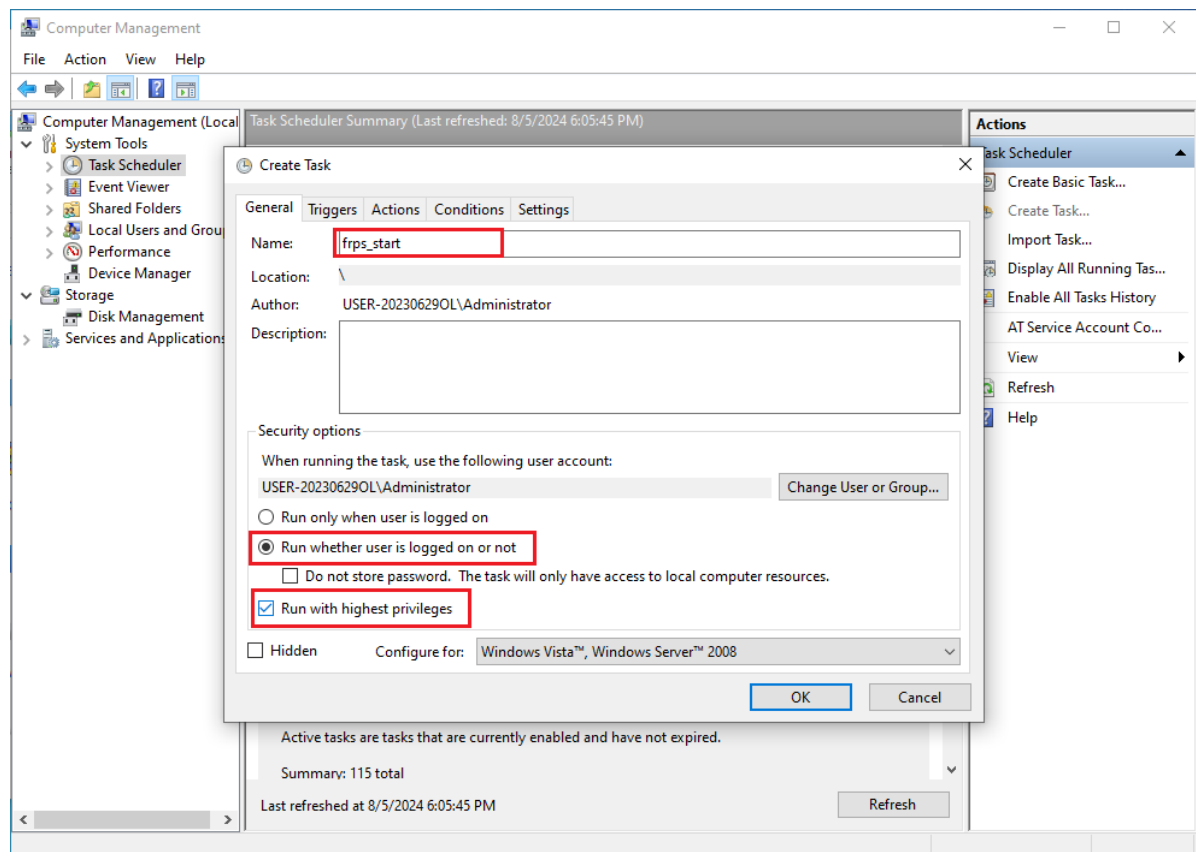

Click Task Scheduler

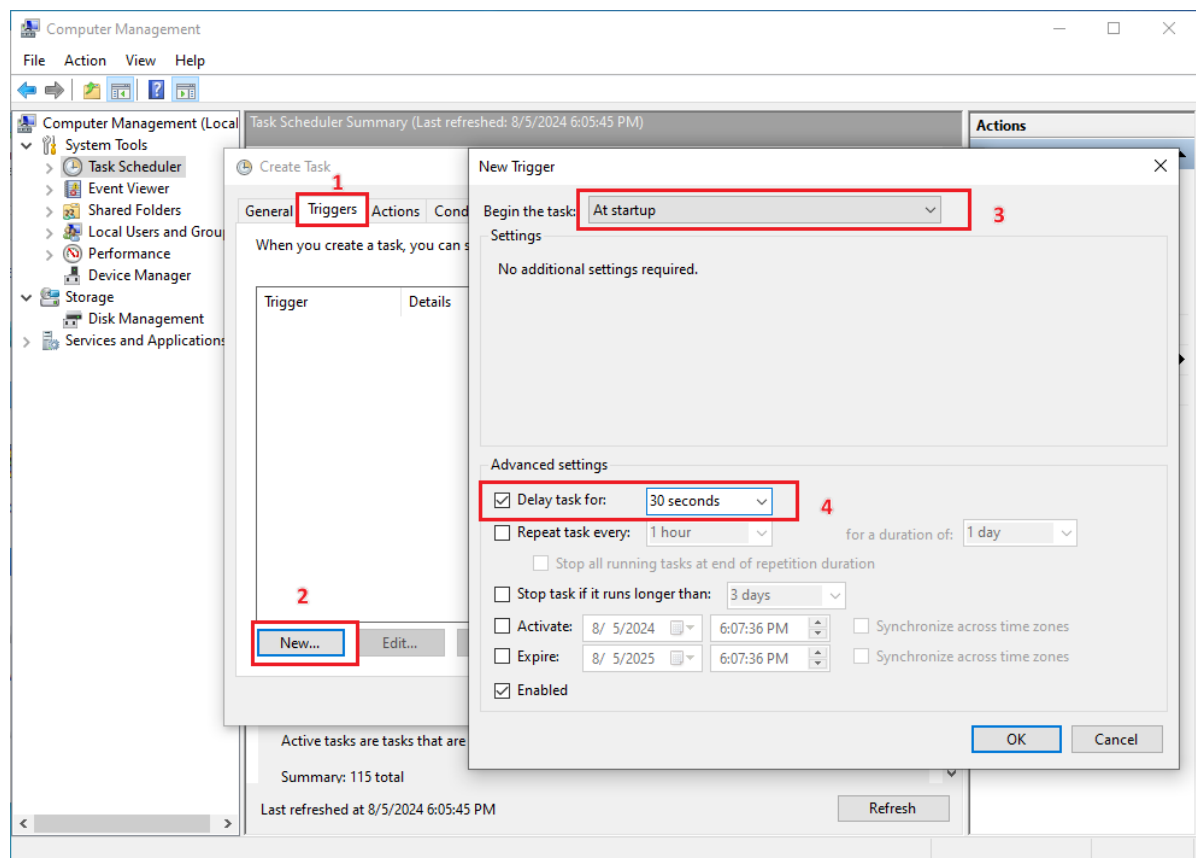

Click Create Task.

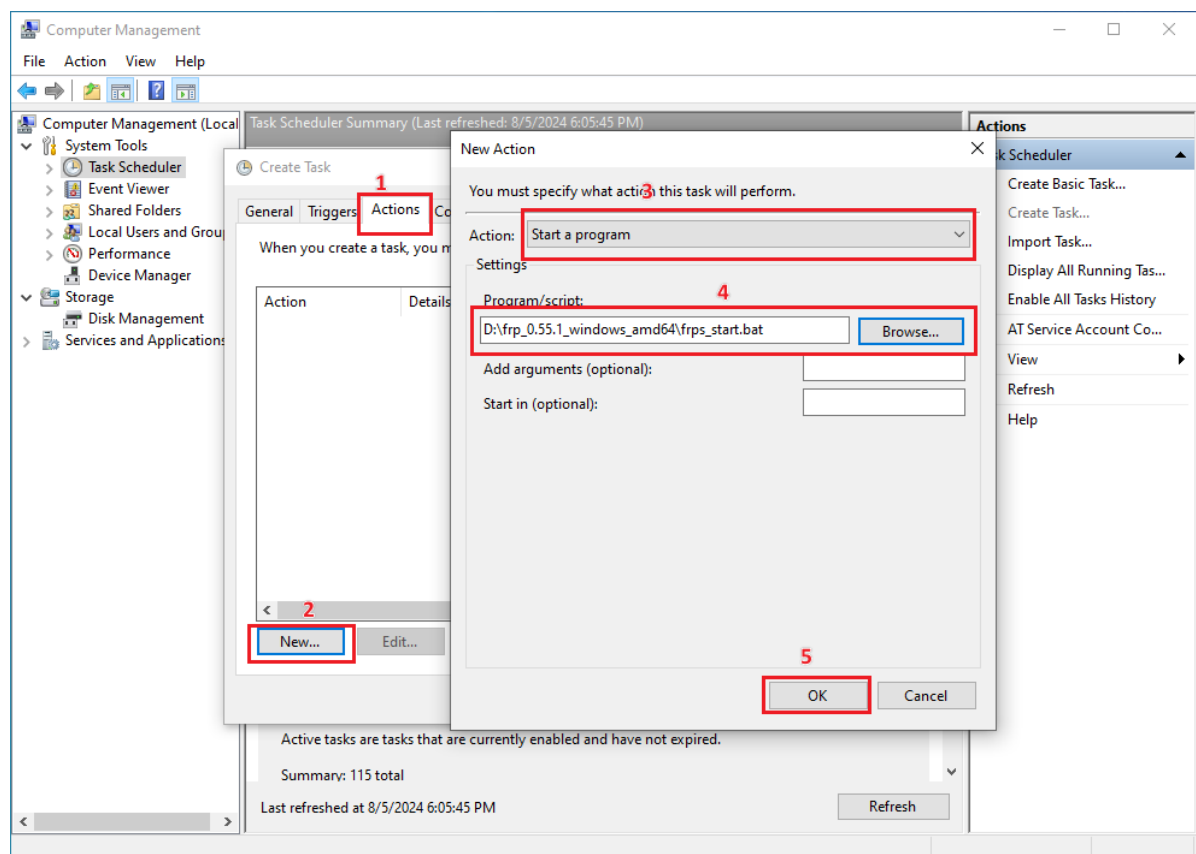

Fill in the red box as shown below.

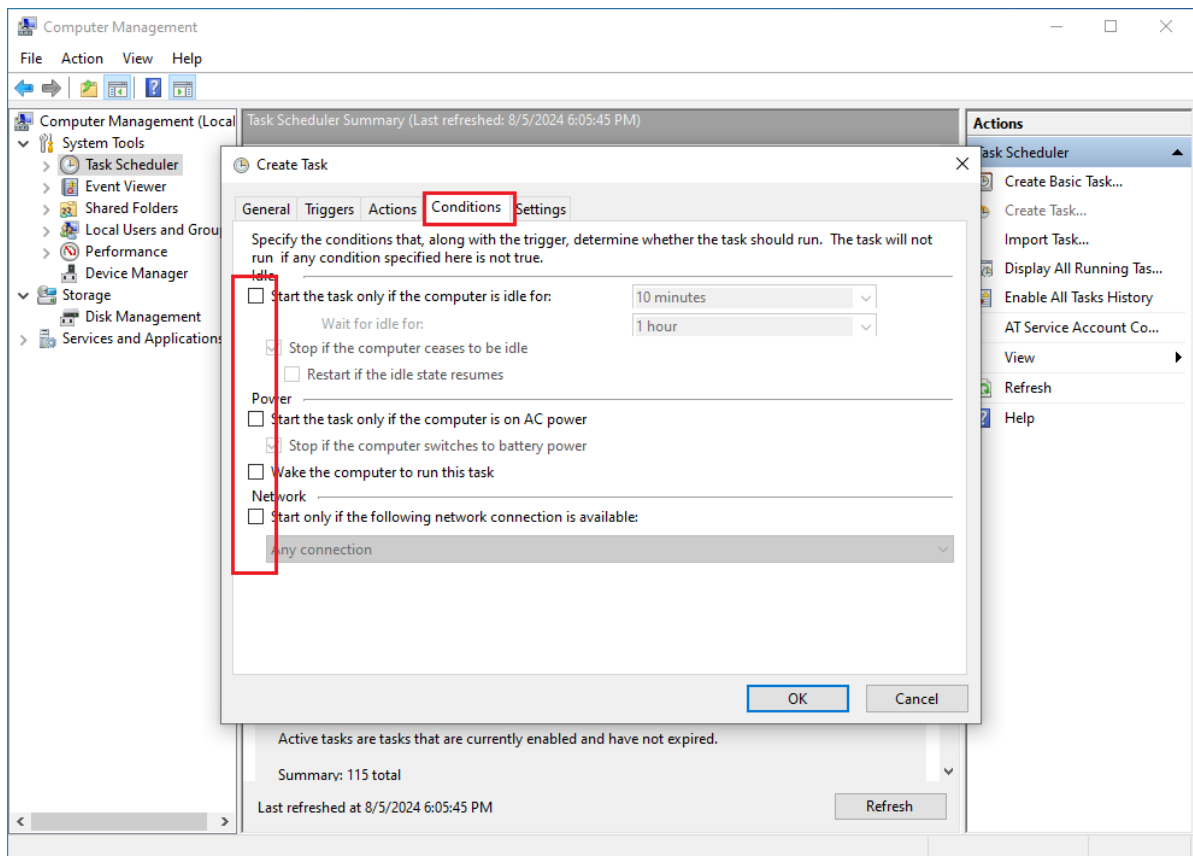

Then set it up as shown in the steps below, and click OK after the settings are completed.

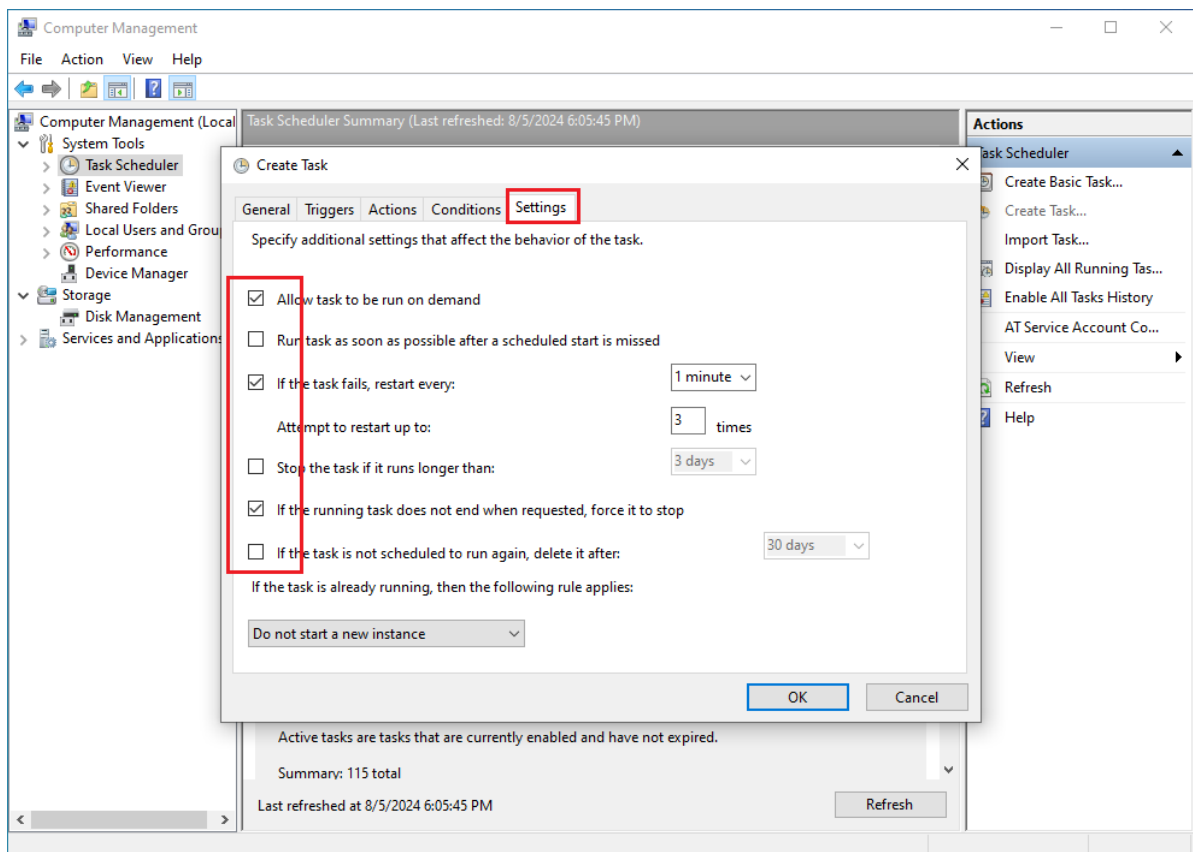

Then operate as shown in the figure below.

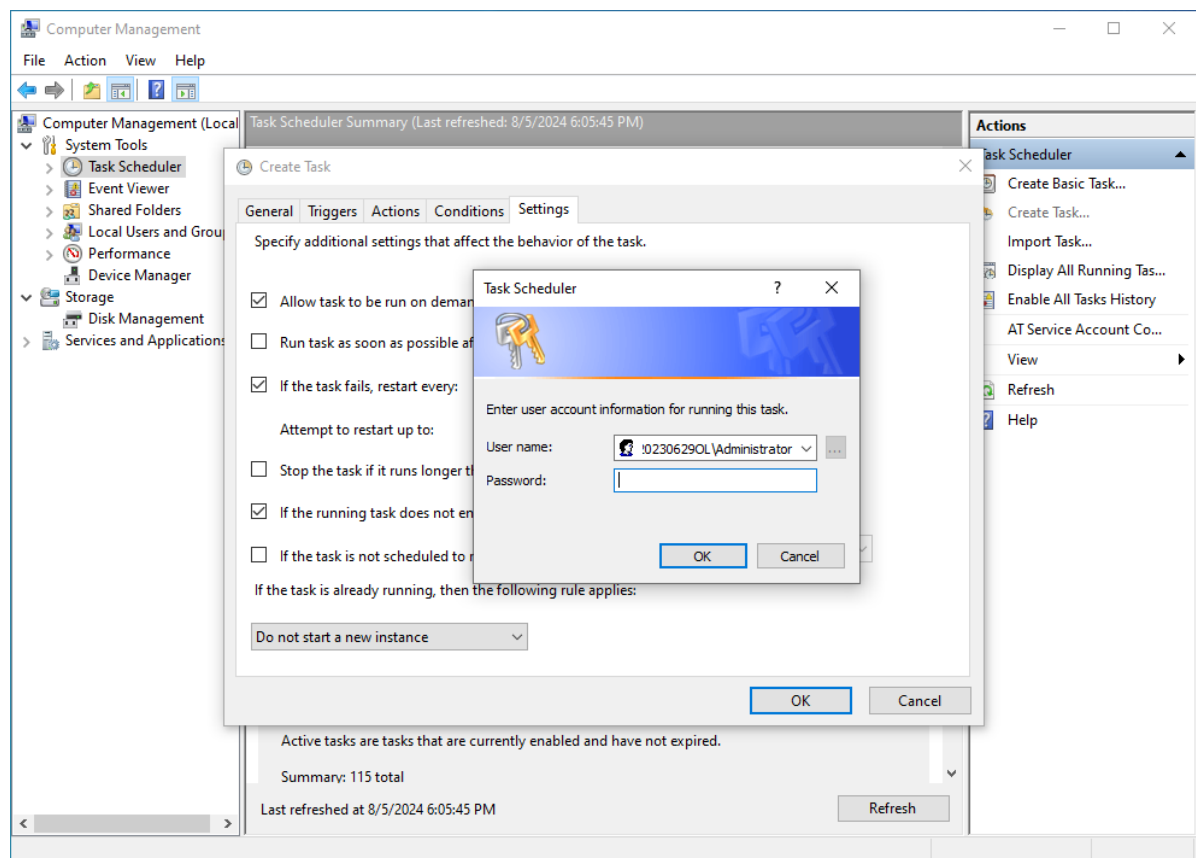

Then click the Condition button and set it as shown in the figure below.

Then click Set and configure as shown in the figure below.

You may need to enter your password after clicking Confirm. If you are logged into a Microsoft account, you need to enter your account password (not the power-on password!)

If all passwords do not work, just check the option not to store passwords
