

4. Add navigation path to app

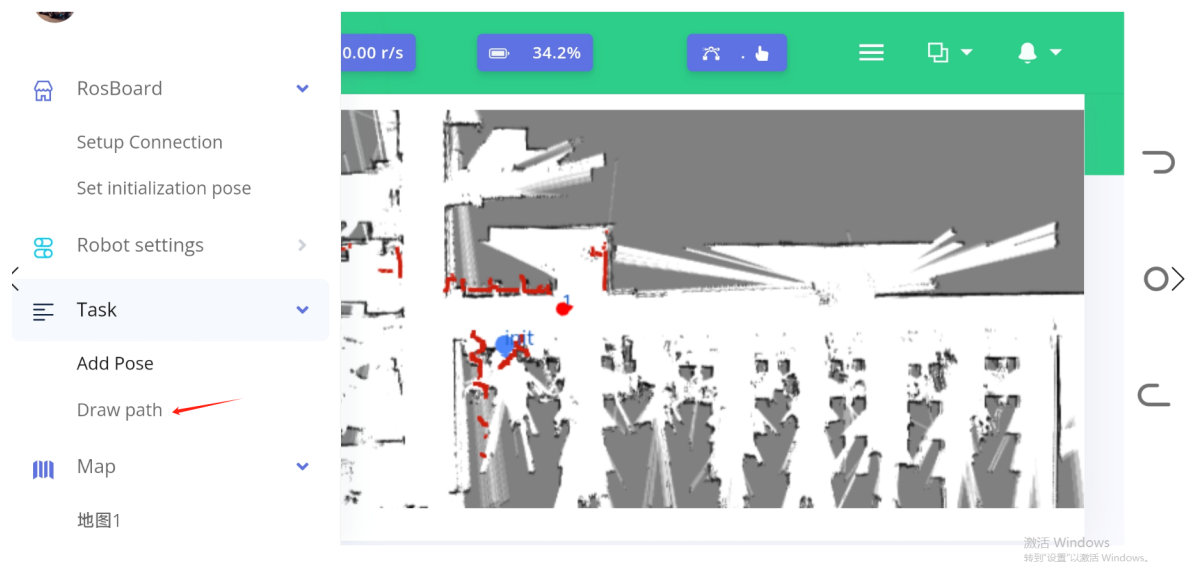

Function operation

Continue the operation in Section 3. The vehicle connection and login operation will not be described here. Please refer to the documents in the previous sections.

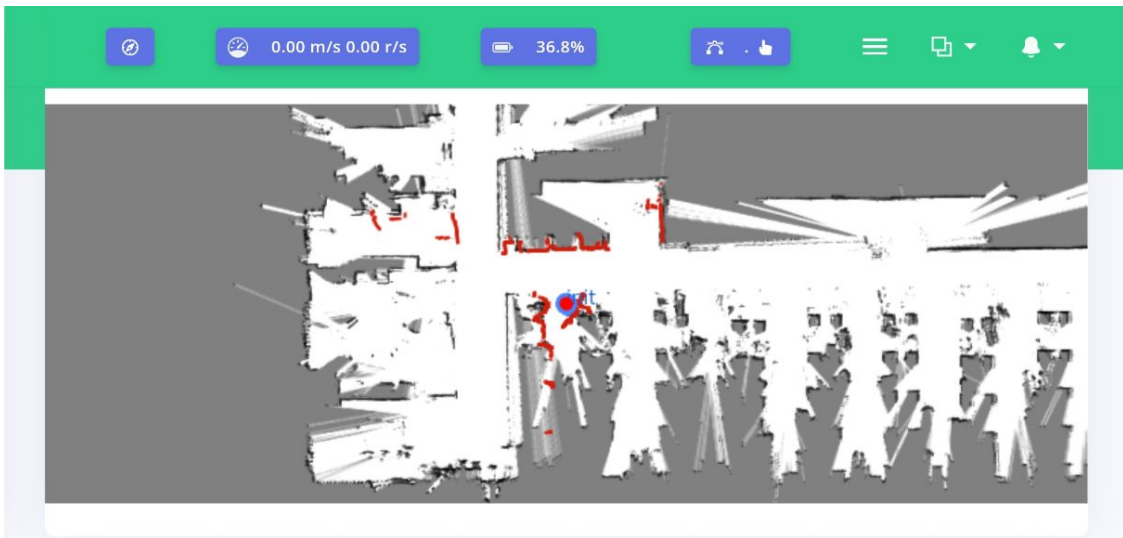

After selecting the map and setting the initialization point successfully. Click the navigation button in the status bar, and the navigation interface will pop up on the left. As shown in the figure below.

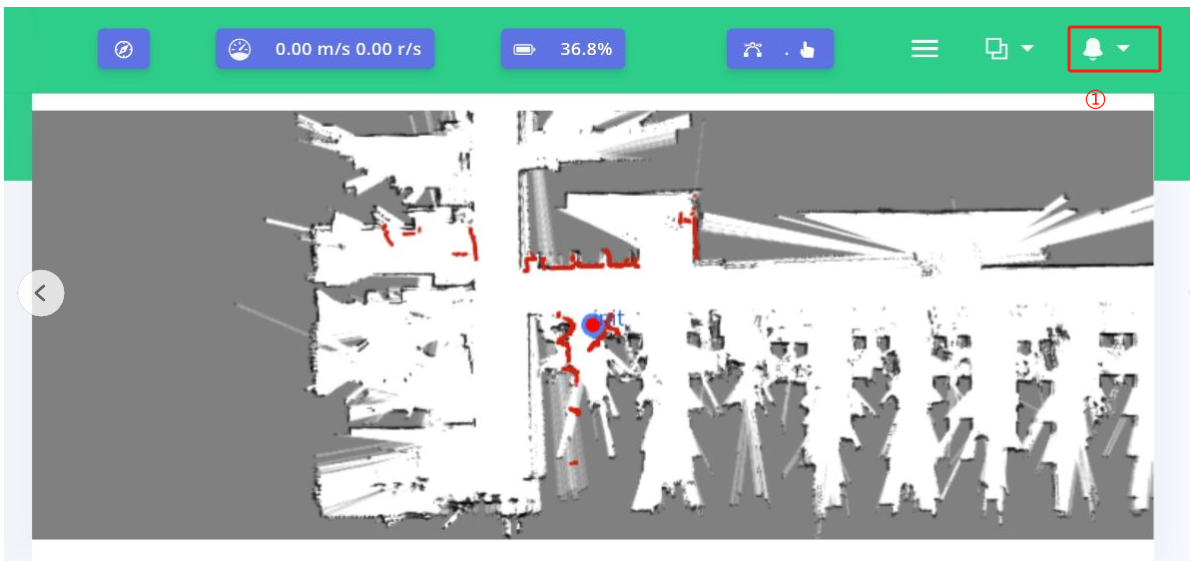

Then click Add Path, as shown in the figure below:

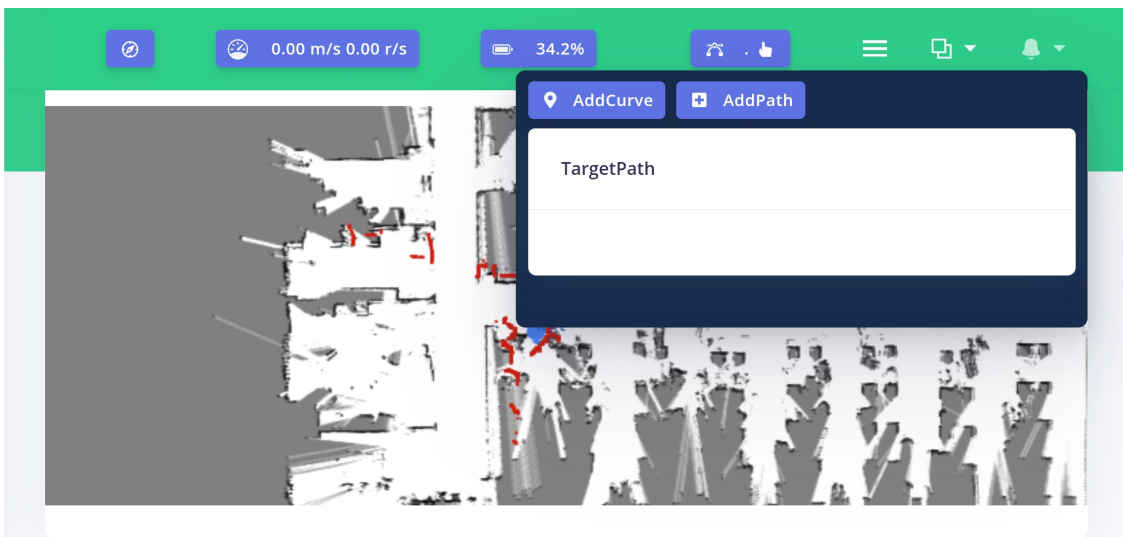

Enter the drawing interface as shown in the figure below:

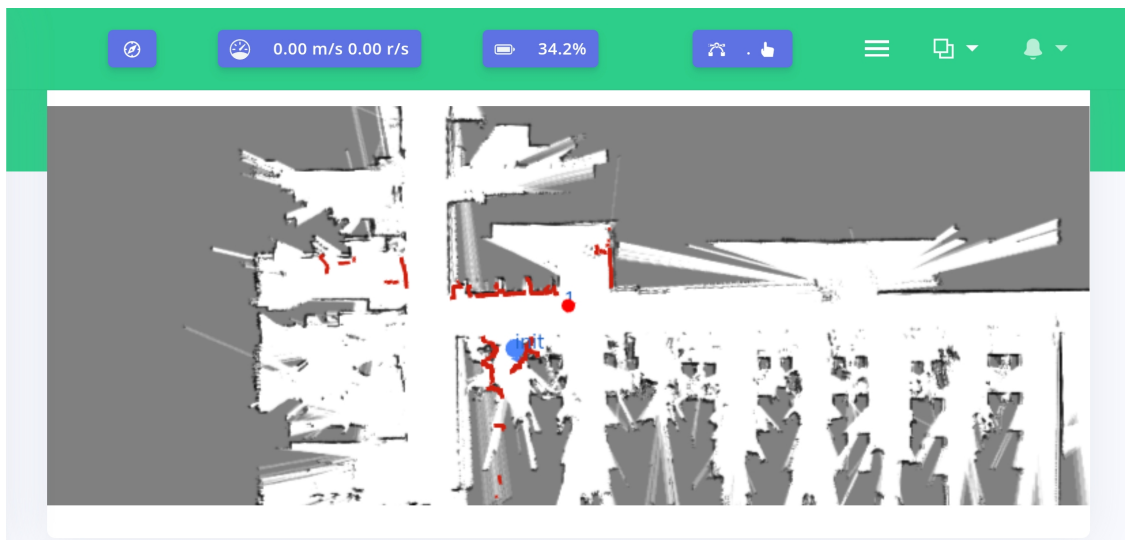

As shown in the figure below, click the button in the upper right corner

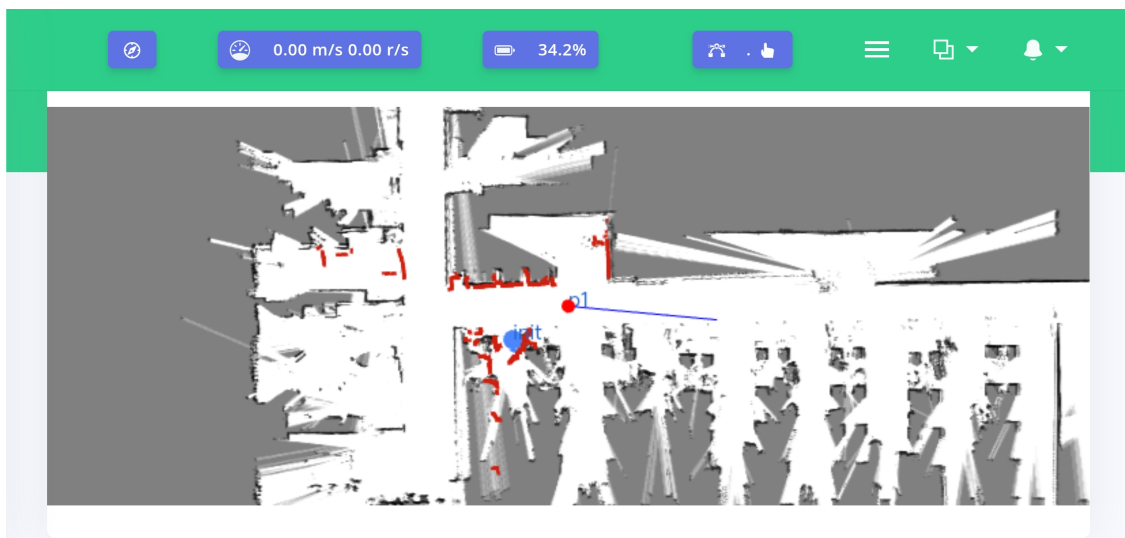

Click Add Path in the pop-up interface

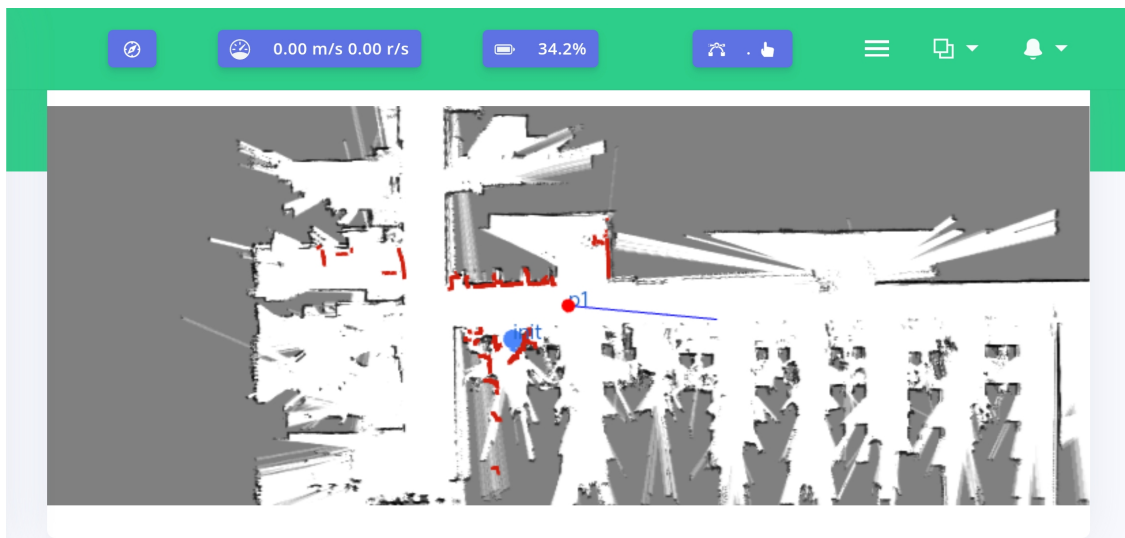

Then move the red dot to determine the first point of the path.

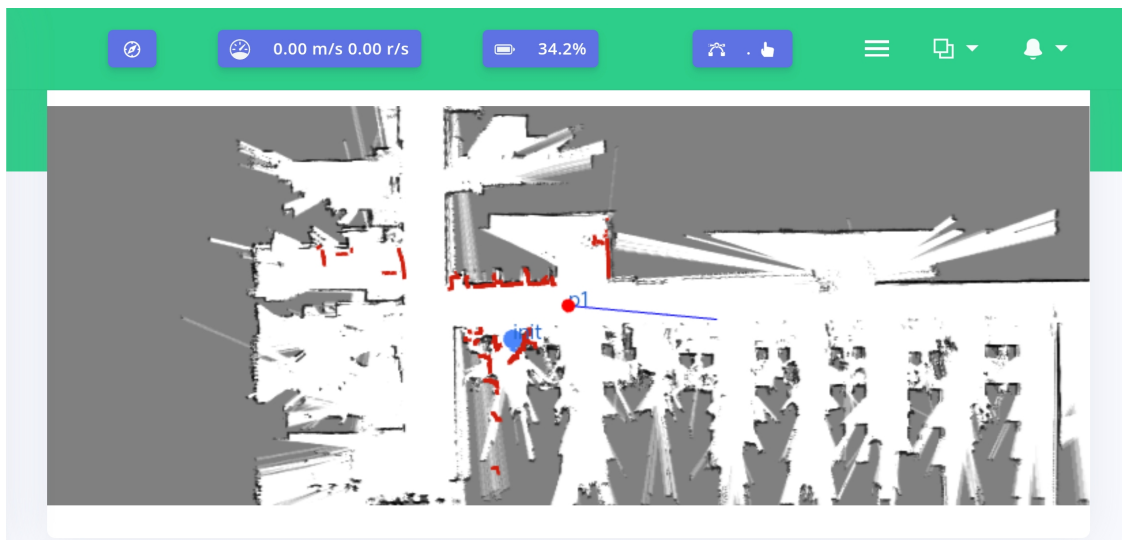

Then lift your finger and press here to determine the second point of the path by moving the line position.

Then lift your finger, enter the path name in the pop-up window, and click OK

The following figure shows the added path, which will be displayed on the map.

Click the upper right corner to see the added path list.
